# EXT: youtubeapi

## Table of Contents

# 1.1 Introduction

## What does it do?

The Typo3 extension youtubeapi gives you the ability to list videos on the frontend. You can display videos of a certain category, tag, keywords or a channel. Also,

- search by tags, categories, keywords or certain channels in backend or frontend

- sort by date, relevance, views or rating.

I got inspired by Vikram Vaswani, who wrote an interesting article how to integrate the Google Youtube API.

Keywords: Extension, Frontend plugin, Youtube, API, MVC

## Requirements

You need the extensions "div" and "lib", to let work youtubeapi properly. This extension is built on the MVC-Framework
